Music Canada Gold-certified credit · 101 music videos · KushdUp Filmsz, built and sold · tdotssolutionsz.com — 101 videos · 54 artists · 25.3M+ views · github.com/DareDev256 — 20 repos · 138 stars

What I want: a creative-technology seat on a team where AI production tooling is built, not only used. I directed and produced for a decade, then built the tools; this would be my first seat inside a team.

What I do: I make the pipeline as well as the picture: directing, editing, and the software that runs generation and post. The AI work is 2025 onward and dated as such. Everything before that is software, automation and production work.

How I work

- Spec first, then code. The brief is written before generation starts, and the review checks the output against acceptance criteria, not style.
- A green test is not evidence. Before I trust a check I ask what a failure would look like through it. I delete guards to see a test go red, look for functions called by nothing but their own test, and verify against the deployed artifact rather than the build log.
- I have been wrong in ways I can name: a green unit test defending a mislabel, a deleted constant that passed import and failed only inside the handler, a scheduled job that reported success for weeks while dead. Each one became a check that now runs on every build.
- The reference is the brief. Every generated frame gets reviewed against the client's reference and the cut, and I say when the model is the wrong tool for the shot.

EXPERIENCE

Creative Technologist and Software Engineer, independent

DareDev256 — Toronto | Feb 2025 – Present

- **fcp-mcp-server (2025–26).** First MCP server for Final Cut Pro. Published on PyPI and in the official MCP registry: 107 stars, 19 forks, 1,808 tests, 88 operations across 13 tools, outside contributors. Drives a live Final Cut Pro instance. Security passes for path traversal and XXE because the server takes file paths from a model.
- **AI image and video pipeline (2025–26).** Gemini image models, Veo, Higgsfield and Kling wired into client site builds and studio work; batch generation with review and refinement in the loop.
- **tdotssolutionsz.com (2025–26).** Cinematic music-video portfolio with a 3D tunnel catalogue (Three.js, React Three Fiber, GSAP): 101 videos, 54 artists, 25.3M+ views.
- **ShopBayHQ (2025–26).** Automotive retail platform, live at app.shopbayhq.com. Security pass (mass-assignment, owner-boundary, session-fixation; zero production npm-audit findings), OpenTelemetry, and a lazy-loaded Three.js showroom.

Founder and Executive Producer

TdotsSolutionsz / KushdUp Filmsz — Toronto | 2010 – 2019

- Founded a production company, 101 music videos for artists including Chief Keef, Migos and Masicka, Music Canada Gold certified. Ran KushdUp Filmsz as Executive Producer through 2019, then sold it.

Creative Technologist

Forest Hill Real Estate — Toronto | Dec 2021 – Feb 2025

- 100+ branded video and photo campaigns for luxury listings; a repeatable editing pipeline cut post-production time 35%+.

Lead Developer, contract

BetMetrics.ca — Toronto | May 2026 – Present, paid retainer

- Sole engineer on a live multi-sport analytics platform for a business owner: 377+ registered users, about 800 wagers placed, odds from 11 sportsbooks, settlement every 30 minutes on Convex.
- Built to Ontario gaming compliance shape: KYC, age verification, responsible-use disclosures, audit-logged admin actions, role-based access. AODA accessibility pass. Mozilla Observatory B+.
- Next.js 16, React 19, TypeScript, Convex, Clerk, Vercel.

Web Developer and Workflow Consultant, concurrent client

Edson Legal — Toronto | 2013 – Present

- Thirteen years running the website and intake workflow for a personal-injury firm under Law Society of Ontario rules, PIPEDA and PHIPA. Intake handles medical records, accident reports and insurance-claim documents.
- Kept marketing and intake as separate systems so no client detail ever entered a marketing tool. Earlier automation (reminders, follow-ups, email sequences via Twilio and OpenAI) cut manual admin about 60%.

- **AI intake CRM (2026)** built behind a fail-closed compliance gate: no real client data until the zero-retention workspace and data-processing agreement are signed. That gate is deliberate.

Community Strategist and Tooling Developer

Nin Online, Steam MMORPG — Remote, part-time | Jun 2019 – Feb 2026

- Community and content strategy across regional teams for a live game, 2019 onward. **NinWikiBot (2025–26)**: an automated wiki knowledge system on the Fandom API, adopted by the game's developers, open-sourced as `fandom-wiki-bot-template`.

SKILLS

Production and creative: directing and producing (101 music videos), editing pipelines, Final Cut Pro, motion graphics, Three.js / React Three Fiber, GSAP, AI image and video generation (Gemini, Veo, Higgsfield, Kling)

AI engineering: Anthropic, OpenAI and Gemini APIs; multi-agent orchestration built directly on the provider SDKs (LangChain and LangGraph evaluated, not shipped); RAG with citation grounding; structured outputs; prompt caching; Model Context Protocol, one published server and one in private production; local inference with Gemma and Qwen for sensitive data

Languages and frameworks: Python 3.12 (FastAPI, asyncio, pytest), TypeScript, Node.js, React 19, Next.js 16, Convex, PostgreSQL, SQLite

Delivery and verification: Claude Code daily; spec-driven development; eval harnesses and regression suites; mutation and reachability checks; Playwright; Docker; GitHub Actions; PM2; launchd; Vercel; OpenTelemetry

CERTIFICATIONS

AWS Certified AI Practitioner (2026) · **Google Cloud Generative AI Leader (2025)** · **IBM Professional Certificates (2024–25)**: Generative AI Engineering, AI Engineering, AI Developer, Full Stack Software Developer, AI Product Manager
